LIMS-plus Release Notes 5.3.31-5.3.33

TFS No.	Description	Solution Description	Known Limitations
29694	A confirm delete option has been added when a user selects Delete from the Results entry screen on existing entered results.	In Examination and Sample Results page, when the user selects a result in the tree-view and selects Delete in the left-click menu, the user will see a Confirm Delete dialog to which they will answer Yes or No.	
38248	Secondary Evidence Description and OtherId are retained appropriately when evidence is edited on Evidence tab.	When an evidence item is edited, the existing Secondary Evidence Description and Other Id will be retained.	*Secondary Item Descriptions and Other IDs are not saved if the item is not related to the request.*
41061	When adding a new Storage Location, assigned Roles are now retained appropriately.	Assigned Roles will be present as they were selected prior to Save.	
43616	The Static Report file name in a Notification email is updated to use a new naming convention instead of "Static Report".	The name of the attachment has been updated to [Lab Case No.]_[Request No.]_[Attachment Description]_[Version].	
44106	The LastUpdateDate value for a request is only updated when an action has been performed on the request.	LastUpdateDate will not update when clicking on the Main Case View tabs. It will only update for a single request if an action was performed on the specific request.	
47218	The 'Add' button associated to a grid within Sample Batch Results entry functions appropriately when adding a row for an existing result in batch processing.	When this issue was logged, it was related to the "old" way of results entry in Sample Batch. The nature of the new Sample Batch Results entry has resolved this issue.

TFS No.	Description	Solution Description	Known Limitations
48147	User has the ability to bulk register barcodes for evidence items from the Evidence Tab in the Main Case View.	On the Evidence Tab, the user now has the ability to register one barcode each for item without having to individually select items, click Edit, select Register, then scan or type the ID, click Save, etc. because this was a very time-consuming process.	*Optimal performance occurs with 200 or fewer evidence items associated to a case.*
48480	Completed necessary updates within LIMS-plus to accommodate Qualtrax API changes related to Workflow Definitions and List Items.	When using the Qualtrax Workflows	Add workflow function, the user will only see a list of workflows based on the configuration AND the fact that the workflow is ONLINE. Offline workflows will not be available for selection in the Add Workflow	Workflow picklist. When selecting an ONLINE workflow where the Inbox Display field is of "List" type, the List of values presented will only be values that are marked as Enabled in the Qualtrax application.	
48484	Application Message has been refactored to appear to the left of the Lab Listing.	The Application Message has been updated to appear to the left of the Lab Listing.	
48507	User has the ability to bulk generate barcodes for evidence items from the Evidence Tab on Main Case View.	On the Evidence Tab, the user has the ability to generate and print one or more barcodes for items without having to individually select items, click Edit, select barcode definition and printer, click Save, etc. because this was a very time-consuming process.	
48508	Updated Agency Type to support the use of an apostrophe when viewed in the dropdown.	Agency Type has been updated to display in the dropdown as entered when an apostrophe is used.	

TFS No.	Description	Solution Description	Known Limitations
48588	Printer name value has been updated to support 255 characters in the TempPrinterDocument Table.	Increased the size of TempPrinterDocument Printer name value field to support 255 characters.	
49036	Existing Sample Batch form is updated to allow for a much richer user experience.	The Sample Batch form and process have been modified to provide the user with a richer, more streamlined experience. Please see the Help Files for a detailed description of Sample Batch updates.	*Any two of the exact same examinations (or DUIs) that could potentially be in progress at the same time (ie. parallel examinations or sequential exams where each is "not required") should not be used in Sample Batches.* *IsReviewed flag is not retained for samples without results when closing and re-opening a batch.* *Required Fields – user must satisfy the required field before proceeding, this includes navigating to another sample and Closing the batch.* *When the same samples from different requests are added to a sample batch, the sample batch grid "No. of Samples" value will indicate the quantity of items, not the quantity of item/request paired items.* *Visible Conditions cannot be validated from within a Batch.* *'Add' button within a Sample Result grid DUI does not function if there are no existing rows in the grid.*

TFS No.	Description	Solution Description	Known Limitations
49347	Upgrade the LIMS-plus application to use JTHub and JTTray versions 1.1.0.0.	A new version of JTTray was created that moved the JTHub URL storage to a registry key, implemented a time-checker on JTTray to ensure it was connected to JTHub, and implemented a version number on the JTTray console. LIMS-plus is now using JTHub and JTTray versions 1.1.0.0.	
49429	Barcode Definition Mapped Printer Is Applied on Definition Selection in the Bulk Generate Barcodes modal.	In the Bulk Generate Barcodes modal, when a barcode Definition is selected that has a Printer mapped in Barcode Printer Settings, the assigned Printer will populate as the Printer selection.	
49605	When LIMS-plus is unable to communicate with JTHub, the AppPool remains connected.	When LIMS-plus cannot communicate with JTHub, the application pool does not crash and cause the user not to be able to login to the application.	
49833	In the Evidence tab, the application will prevent the use of over 30 characters when registering a barcode ID.	The application will prevent submitting barcode IDs more than 30 characters in length.	
50255	A Produce Attachment Activity with no template defaulted, and a report template later selected at the time of the Activity, will generate and store a .pdf attachment instead of an .rpt attachment. The file name is updated to use a new naming convention.	The report is automatically stored as a request related attachment related to the request above with a file type of .pdf with a file name of: [CaseNo]_[ReqNo]_[PA Description]_[Version] (where version starts with "0").	
50283	Service selection is mandatory, along with Examination Type, when creating Sample Batches in the Sample Batch Wizard.	Service is now mandatory (along with Examination Type) to be able to differentiate between an exam that exists in a parallel set and one in a sequential exam.
